

# How to use Maven with customer-tracker project

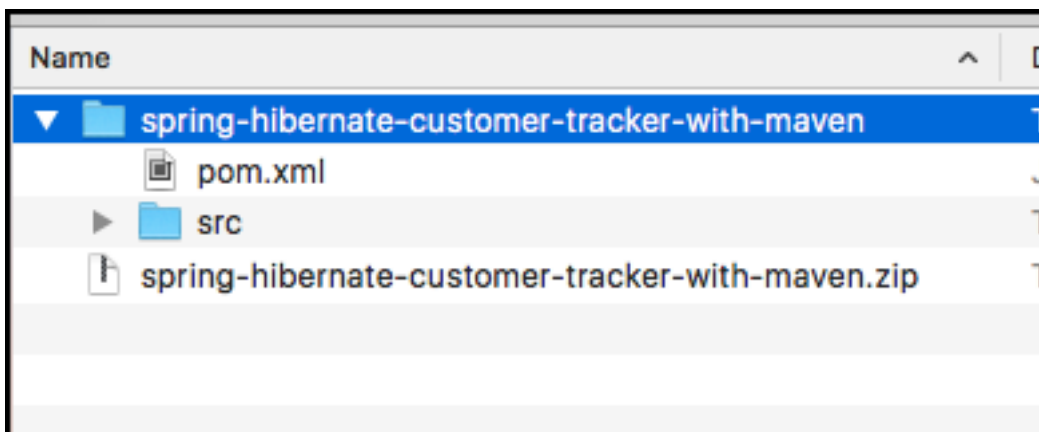

This document explains the steps required to use the customer-tracker app with Maven.

--

1. Download link: <https://goo.gl/xBVDia>

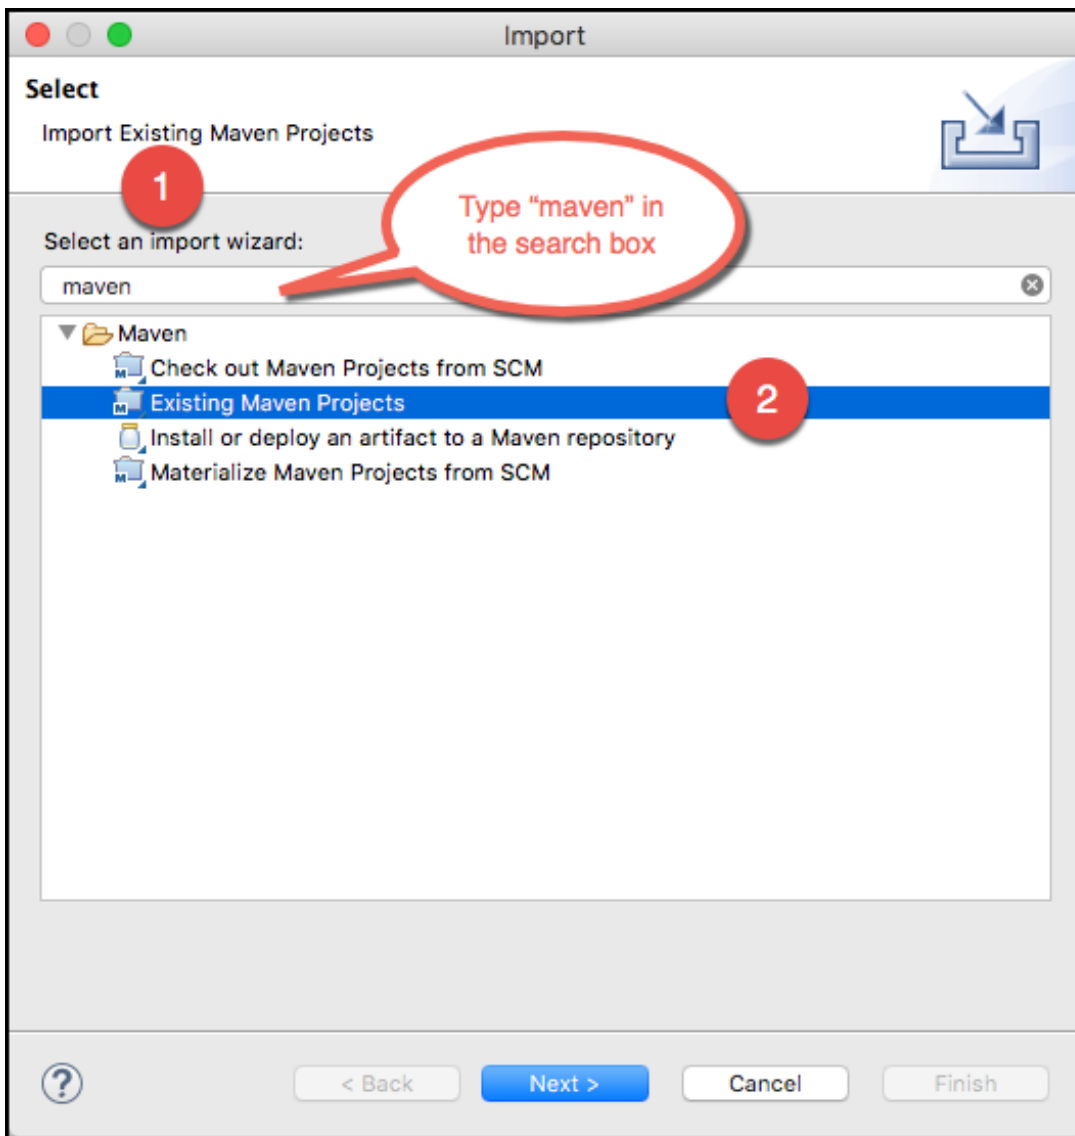

2. Unzip the file.

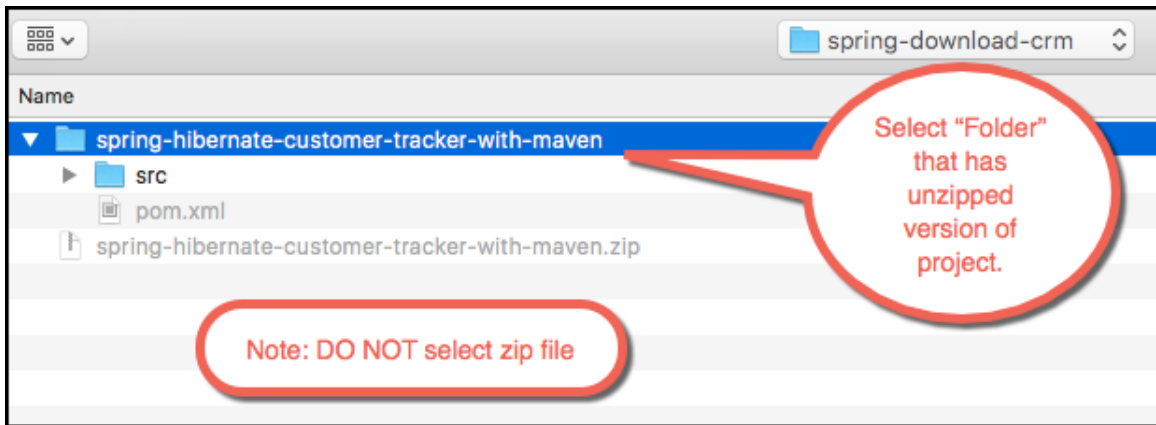

3. Click **File > Import**

4. Type the text **maven** in the search box under **Select an import source**:

5. Select **Existing Maven Projects**

6. Click **Browse** and select the **folder** that is the root of the Maven project (contains the pom.xml file)

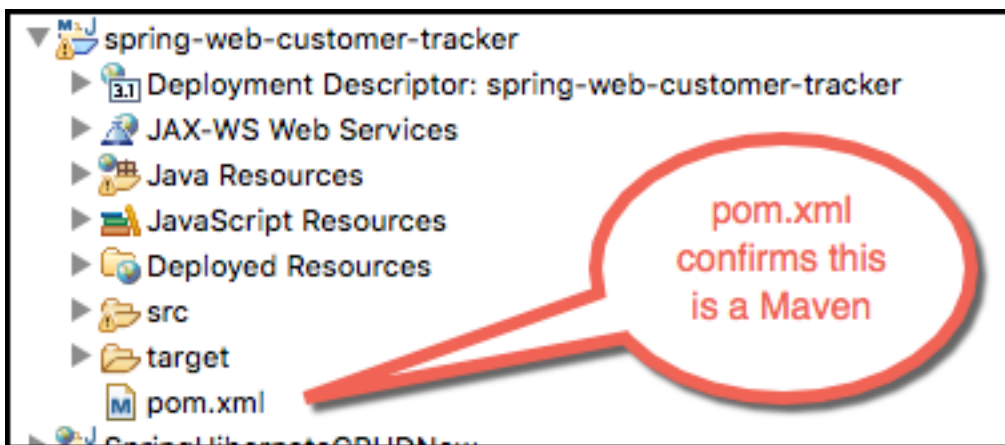

7. Click **OK** and then Click **Next**

8. Click **OK**

9. Under **Projects**: click the checkbox next to the **pom.xml** file

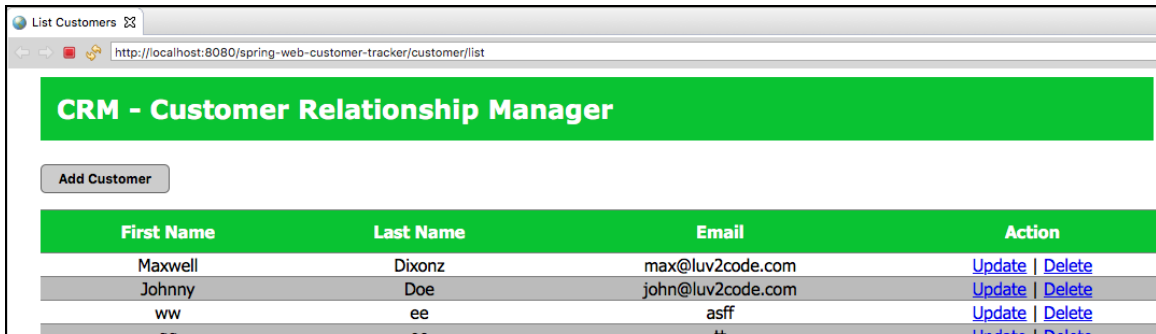

10. Click **Finish**

11. In the left hand panel, you will have a new Maven project for: **spring-web-customer-tracker**

12. You can run this project using: right-click, Run As > Run on Server

13. Your app will run and you will see output like this:

Congrats! You just imported a Maven project :-)
